Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously presented) A method for assisting a user with the proper printing of postage indicia onto labels in rolls of labels in a label printer, the method comprising:

providing a roll bearing pre-printed labels for printing with postage indicia, the roll having a plurality of label sets, each with a leader portion and a label body, where each leader has a serial number which is the same as a serial number located on its corresponding label body; and

providing interactive computer software that guides a user to confirm that the serial number on the leader portion matches a label serial number in the software.

2. (Original) The method of claim 1, wherein the plurality of label sets are positioned on a carrier.

3. (Previously presented) The method of claim 1, wherein the method permits the user to correct the serial number in the software prior to printing the postage indicia.

4. (Original) The method of claim 1, wherein the software queries the user as to a range of serial numbers to be pre-printed with postage indicia onto a range of label bodies.

5. (Previously presented) The method of claim 1, wherein the software has error control features which at least one of warns a user if a serial number entered into software is an invalid number, warns a user if the number of label bodies on the roll of labels to be printed are less than a number of labels a user wishes to print with postage indicia, and will automatically feed a leader portion back into a printer if a user decides not to print labels with postage indicia.

6. (Original) The method of claim 1, wherein the leaders of each label set are adjacent to their respective label body.

7. (Original) The method of claim 2, wherein the plurality of label set are positioned in a spaced apart orientation on the carrier.

8. (Original) The method of claim 2, wherein each leader comprises a separate label element that is positioned on the carrier adjacent to its corresponding label body portion.

9. (Original) The method of claim 2, wherein each leader comprises a portion of the carrier adjacent to its corresponding label body upon which is printed the same serial number.

10. (Original) The method of claim 1, wherein the serial number is located horizontally on the leader portion, and the serial number is located vertically on the label body.

11. (Original) The method of claim 1, wherein the serial number is located horizontally on both the leader portion and the label body.

12. (Original) The method of claim 11, wherein the leader portion is divided into a serial number bearing portion and a supplemental information bearing portion.

13. (Canceled)

14. (Previously presented) A method for assisting a user with the proper printing of postage indicia onto labels in rolls of labels in a label printer, the method comprising:

providing interactive computer software that guides a user to confirm that a serial number on a label in a roll of labels to be printed with postage indicia matches a label serial number in

the software, wherein the method permits the user to correct the serial number in the software prior to printing a label with postage indicia.

15. (Previously presented) A method for assisting a user with the proper printing of postage indicia onto labels in rolls of labels in a label printer, the method comprising:

providing interactive computer software that guides a user to confirm that a serial number on a label header and a label body of a label set in a roll of label sets to be printed with postage indicia matches a serial number in the software, wherein the software queries the user as to a range of serial numbers of labels to be printed with postage indicia.

16. (Previously presented) A method for assisting a user with the proper printing of postage indicia onto labels in rolls of labels in a label printer, the method comprising:

providing interactive computer software that guides a user to confirm that a serial number on a label in a roll of labels to be printed with postage indicia matches a serial number in the software, wherein the software has error control features which one of at least warns a user if a serial number entered into software is an invalid number, warns a user if the number of labels in a roll of labels to be printed is less than a number of labels a user wishes to print with postage indicia, and will automatically send a message to a printer to withdraw a label back into the printer if the user decides not to print labels with postage indicia.

17-24 (Canceled)

25. (Previously presented) A method for assisting a user with the proper printing of value bearing indicia onto labels in rolls of labels in a label printer, the method comprising:

providing a roll bearing pre-printed labels for printing with value bearing indicia, the roll having a plurality of label sets, each with a leader portion and a label body, where each leader has a serial number which is the same as a serial number located on its corresponding label body; and
